

THE ORIGINAL SSPD

In partnership with the Veterans Administration,

Kennon created the first Soft Suicide Prevention Door, in 2009. Before that, behavioral health units were potentially dangerous places, with the door being a prime ligature anchor. Our SSPD sought to eliminate that, breaking away with just 20 pounds of pressure. Our thoughtful design includes a soft foam core which prevents the door from being used as a dangerous weapon. It's easy to clean and highly durable.

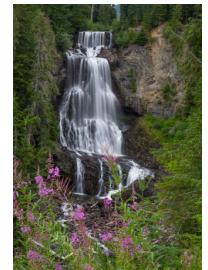

- Promotes patient safety
- No ligature points
- Privacy/Visibility balance
- Easy to retrofit
